lating the time of day; when I questioned them as to the hour, they were often as much as an hour off, usually behind.

Most activities are ordered with reference to the Gregorian calendar, but the twenty-day Maya calendrical month, defined as "twenty days or a month" is used in much the same way that we use "a fortnight." The Indians consider the moon to be an uncertain indicator of time, since "she does not walk well." But the moon is important in the culture: people note its different phases and are especially aware of the phase under which a child is born—an important sign for the newborn's future. If a baby is born at the full moon, he is expected to mature more readily. The full moon also signifies a propitious time for undertaking certain activities, such as cutting wood for the main posts of a house and cutting palm for the roof.

The Daily Schedule

Daily activities are organized by traditional economic pursuits. The woman is the first one to rise in the morning. She gets up at dawn, lights the fire, and sets a jar of water to boil for coffee. She grinds the nixtamal cooked the night before on the stone grinding board, or takes it to the mill in the center. She then makes tortillas either by hand or with a press; a recent innovation made of two hinged pieces of wood in which the ball of dough is set between pieces of plastic paper.

The men of the household are served first, followed by the boys; the women and girls eat last. As soon as they have eaten, the men and boys who have finished the required three years of schooling go out to the fields to work. They walk single file even in the streets of the town, the father preceding his sons. Each carries a machete, net bag, tumpline, and sheepskin back-protector if he plans to carry any loads. Many bring shotguns as well in order to hunt for field rats, raccoon, or the burrowing animals they find in the fields.

After the men leave, the women go to the porch and "seize their work." The children go to school, which begins at eight-thirty in the morning and continues until five o'clock in the evening. They return home for lunch, a meal of tortillas, coffee, and sometimes beans or chayote when it is in season.

Amatenango del Valle

Women work steadily at making pottery. Older girls help with household tasks from the time they are six in order to permit their mothers to make pottery. They bring the water from the faucets installed at every other corner of the streets in the center, degrain corn, and when they are about ten years of age assist in grinding corn or bring the cooked corn to the mill. In three-generation families, the older woman tends to the tasks of preparing the meals while the younger women make pottery.

The men work uninterruptedly at agricultural tasks, taking only a noon break to eat a lunch of tortillas, coffee, and sometimes beans. During periods of intensive activity, women or children bring a hot lunch to the fields. At about three-thirty they return home, sometimes stopping to collect firewood along the way. When they arrive home, there are no greetings. They deposit their loads of harvested crops, firewood, or *zacate* (leaves and grasses to pack pottery). The children pick these up and bring them into the kitchen with no words spoken. The men sit on the bench of the porch, sometimes assisting their wives with degraining, and "rest their heart" until supper is served about six o'clock. The final task of the day is cooking the nixtamal for the following day's meals. The family retires about eight o'clock.

The weekly scheduling of household celebrations indicates the thorough absorption of the Catholic calendar into the social schedules of the town. The choice of Saturday and Sunday for most household celebrations is geared to a week in which Sunday is a day of rest.

Other significant days of the week are Thursday and Friday. Thursday is thought to be the day when "the earth is open." House curing fiestas are scheduled on this day since the earth of the house floor can receive its gift of liquor. This is also the appropriate day to visit the caves to ask for crops and cattle, or to make payment with candles. Friday has a sacred quality because of the crucifixion, but except during Holy Week and Lent the townspeople ignore any proscription on eating meat.

The Annual Cycle

The annual ceremonial cycle of religious rituals and life crisis events establish the pattern by which the people schedule their economic activities. Since the township gained dependence in 1931, there is no forced labor on

175
632
466 communal projects for the neighboring town as there had been formerly. The peasant is master of his own time.

125
221
512 Tables 33 and 34 summarize the number of days and percentage of time accorded to various activities for men of two households. The first family consists of a man forty-three years of age and his wife. All of their own children died in infancy, and an adopted daughter recently left home to live with her husband and child in a new ejido plot. The second family consists of a man, his wife, two adult sons, and an unmarried daughter. In this family, the father of sixty-five is retired and his two sons perform all of the agricultural work. Table 34 includes only the activities of the sons.

125
221 The two schedules provide some contrasts:

461
462
561 1. The forty-three-year-old man has many more ceremonial obligations than the youths. This is a factor related to the life cycle in which men over thirty-five years of age are involved in more familial and community celebrations. During the year this schedule was taken, the man was serving as a mayordomo.

2. The older man has fewer productively employed days than the youths (only 54 percent of his time is spent in productive activities) in contrast to 76 percent and 79 percent for the youths). The difference is accounted for by wage employment the youths have undertaken. In order to pay for the cost of betrothal, the elder son worked 56 days (37 percent of the time accounted for) in a neighboring sawmill.

3. The youths were not involved in any exchange labor arrangements; until they become independent heads of households working their own fields, the men do not contract reciprocal exchanges.

221
461
462
796 The fact that men spend only 54 to 79 percent of their time (using these tables to provide minimal and maximal limits) on productive activities means that there is a great deal of flexibility in the use of time for ceremonial responsibilities. Everyone takes an average of twenty days off for celebrating fiestas in addition to fifty-two Sundays.

24
46
[796] The high proportion of time spent in family or communal ceremonials suggests the high value placed on them. The preference for leisure to pursue these activities is proved in cases such as that in which the additional profit in cultivating cabbages was not sufficient to motivate one agricultur-

TABLE 33. Activity Schedule for September 1 to June 29 of Man Owning 1 Hectare of Land and 2 Ejido Plots of ½ Hectare Each

Activity	*Days spent*	*Percent of total time*
Agriculture		46
Preparing land		
Clearing irrigation ditches	12	
Repairing and mending fences	11½	
Clearing land by cutting and burning brush	11	
Irrigating land	8	
Plowing	11	
Planting	6	
Cultivating crops	21	
Guarding crops against animals and birds	3	
Harvesting	34	
Milling sugarcane	8	
Exchange labor	13	
Walking to hot country	4	
Hunting for and tending animals	25½	9
Collecting firewood	13	5
Religious activities		23
Performing duties as mayordomo	26	
Attending Sunday mass and cleaning church	24	
Fiestas, attending mass, participating in playing drum, flute, etc.	21	
Kinship and social obligations		6
Attending funerals	7	
Attending curing ceremonials	3	
Attending betrothal ceremonials	5	
Helping in house-building	1	
Marketing		3
Buying	9	
Selling	1	
Communal labor		2
Cleaning irrigation ditches	1	
Repairing threshing shelter	4	
Business affairs of cooperative	4	1
Assisting town officials	4	1
Outside work	12	4
TOTAL	303	100

241 461 ist to continue growing this labor-intensive crop (Chapter 2). The low propensity to consume, maintained by community-shared standards which inhibit the display of wealth, further reduces the incentives to expand production (Schultz 1964:27). The major reward for hard work is land which, in his middle years, the agriculturalist can turn over to be worked by his sons, thus relieving him of daily toil.

TABLE 34. Activity Schedule for September 1 to February 28 for Two Unmarried Youths

Activity	*Younger brother* Days spent	Percent of total time	*Elder brother* Days spent	Percent of total time
Agriculture		41		25
Preparing land				
Clearing land by cutting and burning brush	26		6	
Irrigating land	3		3	
Plowing land	1		1	
Planting	1		1	
Harvesting crop	11		7	
Doubling over stalks	4		4	
Working in hot country	16		16	
Collecting firewood	6	4	2	1
House maintenance		12		6
Plastering house walls	13		6	
Bringing lumber	2		2	
Making pigpen	3		2	
Pottery		1		1
Bringing clay	2		2	
Agricultural work for others		8		8
Harvesting and carrying corn	3		3	
Plowing	2		2	
Planting	6		7	
Nonagricultural work in sawmill	16	11	56	37
Religious activities		18		21
Attending fiestas	3		3	
Attending mass and relaxing on Sundays	25		28	
Sickness	8	5		
TOTAL	151	100	151	100

571 805 [584] is accepted. Precipitous action on either side reveals a weakness of which the other party might take advantage, or which might even stop procedures.

Timing of activities is so specific that it can be read as an equation of social relations: People who come to the house after nightfall are either intimate members of the family, or are members of the circle of me?tiktatik invited for a special household celebration—night is the time when spirits wander, not a time for casual visiting. Arrival of the betrothal party at the [584] house of the girl's parents after ten o'clock in the morning indicates that the suit has been accepted.

571 805 554 562 Sequential timing expresses relative prestige and a sense of priority. In "raising" the officials for the official ceremonies, the lowest ranks of officials rise first to go to the house and awaken each of their companions in order of rank. The sequence in serving order has already been discussed with respect to rank and prestige. Another principle of sequence operates at a more subtle level: women go before men when there is expectation of a fight since their presence evokes less hostility. This is evident in the betrothal: the me? č'om precedes the mam c'om in the initial proceedings [584] [579] when strong resistance and hostility is anticipated. When drunken fights start during house ceremonies, women intercede with calming effect.

641 829 805 Time always is on the side of the Indians when they wish to resist national orders. Verbal agreements to pay fines imposed or to assist federal agents in the capture of criminals are frequently followed by deliberate negligence in carrying out the orders. Usually the order is forgotten or interest wanes at a higher level. Government agencies such as the INI [647] learned to bide their time much as the Indians did. Expecting opposition to any proposed change, they waited for the initial reaction to die down, and then proceeded as support from those who benefited overcame internal resistence.

461 464 512 805 When called upon to perform jobs that require regular appointments, the Indians respond easily to the daily scheduling. Resistance comes against scheduled requirements that involve long spans of time and interfere with communal and familial ceremonies. Work away from home is [181] undertaken only on the premise that it will be of limited duration. This control over their own time is a value which Indians will not easily yield.
